

Dutch Roadsigns 72036

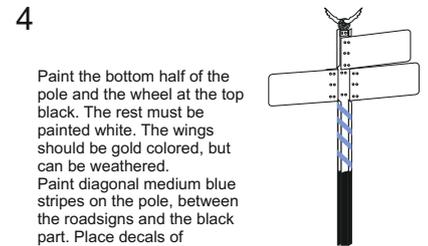

1
Fold both side flaps forward in a 90o angle. Glue front part in position.

2
Attach side roadsigns. Attach wheel part on top.

3
Attach the front roadsign pointing forward. If needed, use the supports, but fold + cut these to size. Attach wings to top wheel.

4
Paint the bottom half of the pole and the wheel at the top black. The rest must be painted white. The wings should be gold colored, but can be weathered. Paint diagonal medium blue stripes on the pole, between the roadsigns and the black part. Place decals of citynames and distances on the roadsigns.

You may want to check the exact cities and distances on Google maps or another mapping application.
